

The diagram illustrates a security system architecture. At the top left, a house (10) is equipped with 'Sensors' (12) and 'Warning Lights and Beeper' (13). A double-headed arrow indicates communication between the house and an 'Individual' (represented by a person icon) on the top right. Below the house, a 'Transmission' block (14) acts as a central hub, connecting to an 'Internet or TCP/IP Network' (15) on the left and a 'Telephone Network' (16) in the center. A radio tower (18) is connected to the Telephone Network. At the bottom, a server rack (19) is connected to both the Internet and the Telephone Network.
